

If the output changes,
the approval should not
travel with it.

One reviewed state

One authorization

One controlled consequence

RELATIONSHIP VALID

or release is blocked

Three versioned synthetic scenarios

Run locally without external providers

A release object is more than an approval status.

Auxtho keeps the reviewed state and the permitted action connected.

- 01 **Exact output**
The reviewed bytes
- 02 **Evidence + policy**
The review context
- 03 **Human authority**
Decision + scope
- 04 **Authorized action**
What may happen
- 05 **Resulting state**
Receipt or reconciliation

RELEASE CONDITION

Every link must still be valid at the consequence boundary.

A broken link is not a warning.

It is a stop condition.

Changed after review? Release blocked.

RC02 - reviewed-version mismatch

CONTROL RESULT

BLOCKED

0 downstream actions

Authorization is not transferable to a changed artifact.

A new state requires re-evaluation and a new decision.

The action may have started. The receipt is not trustworthy.

RC10 - post-action uncertainty

CONTROL RESULT

UNKNOWN

RECONCILIATION REQUIRED

NO AUTOMATIC RETRY

Uncertainty is not failure. And it is not permission to try again.

The path preserves what is known without creating a second effect.

Nothing changed. The path completes once.

RC01 - exact reviewed-state match

CONTROL RESULT

COMPLETED ONCE

1 action / 1 receipt

The control should be quiet when the reviewed state remains valid.

The same boundary handles success, denial, and uncertainty without changing the contract.

Control the exact object that leaves.

WHAT THIS LOCAL PROOF SHOWS

- Versioned synthetic scenarios
- Provider-free Level A mechanics
- Separate verifier
- Inputs, state readback, bytes, digests

WHAT IT DOES NOT CLAIM

- Customer deployment
- Production operation
- External-provider delivery
- Operating effectiveness

Which failure is harder to govern?

A changed artifact before release

or

an uncertain receipt after delivery begins?

AUXTHO RELEASE CORE

Synthetic / local / provider-free
